### Long Term Planning Science

We have identified these learning values as intrinsic to supporting the needs of children in our school: Reflectiveness; Risk-Taking; Stick-Ability; Communication;

#### KS1 National Curriculum

#### The principal focus of science teaching in key stage 1 is to enable pupils to experience and observe phenomena, looking more closely at the natural and humanly constructed world around them. They should be encouraged to be curious and ask questions about what they notice. They should be helped to develop their understanding of scientific ideas by using different types of scientific enquiry to answer their own questions, including observing changes over a period of time, noticing patterns, grouping and classifying things, carrying out simple comparative tests, and finding things out using secondary sources of information. They should begin to use simple scientific language to talk about what they have found out and communicate their ideas to a range of audiences in a variety of ways. Most of the learning about science should be done through the use of first-hand practical experiences, but there should also be some use of appropriate secondary sources, such as books, photographs and videos.

# KS2 National Curriculum

#### Lower Key Stage 2

The principal focus of science teaching in lower key stage 2 is to enable pupils to broaden their scientific view of the world around them. They should do this through exploring, talking about, testing and developing ideas about everyday phenomena and the relationships between living things and familiar environments, and by beginning to develop their ideas about functions, relationships and interactions. They should ask their own questions about what they observe and make some decisions about which types of scientific enquiry are likely to be the best ways of answering them, including observing changes over time, noticing patterns, grouping and classifying things, carrying out simple comparative and fair tests and finding things out using secondary sources of information. They should draw simple conclusions and use some scientific language, first, to talk about and, later, to write about what they have found out.

#### Upper Key Stage 2

The principal focus of science teaching in upper key stage 2 is to enable pupils to develop a deeper understanding of a wide range of scientific ideas. They should do this through exploring and talking about their ideas; asking their own questions about scientific phenomena; and analysing functions, relationships and interactions more systematically. At upper key stage 2, they should encounter more abstract ideas and begin to recognise how these ideas help them to understand and predict how the world operates. They should also begin to recognise that scientific ideas change and develop over time. They should select the most appropriate ways to answer science questions using different types of scientific enquiry, including observing changes over different periods of time, noticing patterns, grouping and classifying things, carrying out comparative and fair tests and finding things out using a wide range of secondary sources of information. Pupils should draw conclusions based on their data and observations, use evidence to justify their ideas, and use their scientific knowledge and understanding to explain their findings.

Working scientifically' is described separately at the beginning of the programme of study, but must always be taught through and clearly related to substantive science content in the programme of study.

#### Science Curriculum Statement of Intent:

We aim to encourage our children's natural curiosity to explore the world around them. Our teaching aims to equip our children with knowledge and understanding through first hand practical activities. Through our curriculum we aim to broaden their scientific view of the world and understand how the world operates. We strive for our children to understand the uses and implications of science in the wider world, and to inspire them to become scientists of the future.

Community Values; Inquisitiveness; Independence; Working Collaboratively National Curriculum Coverage

#### **EYFS**

Science is covered across all seven areas of learning in our early years. It is introduced through activities that encourage the children to explore, problem solve, observe, make decisions and talk about the world around them. The skills that the children learn and develop during the early years will provide the foundations for them to build upon as they move through the school ensuring they become independent learners. The children will investigate lots of different objects and materials and develop an understanding of properties. They will also begin to describe and identify similarities and differences when using these materials. Our children are taught to use their tools safely and to ask for help when they need it. They enjoy looking for mini-beasts and creating habitats for animals in the local environment. All of our children are encouraged to ask questions about why things happen and how they work. They will be given the opportunity to use the internet and books to find the answers to any questions that they have and develop independence, taking control of their learning. As with other learning in early years, the children learn Science through exploratory play e.g in the water play investigating floating and sinking and enjoying games, developing a love of learning.

# Long Term Planning Science

We have identified these learning values as intrinsic to supporting the needs

	Year 1 Plants	
Slightly	make observations of plants (daffodil, daisy, sunflower, rose, lavender, tulip, snowdrop,	
below	holly, dandelion, oak, beech, chestnut, pine)	
ARE	including flowers and vegetables they have planted	
	identify the leaf, root, stem and flower of a plant	
	identify the trunk, branch, roots and leaves of a tree	
Broadly	know that plants produce seeds	
within	identify differences between plants	
ARE	identify and describe the basic structure of a variety of common flowering plants,	
	including trees	
	name some common plants	
	name some plants that live in the garden	
	name some plants that live in the wild	
	name some trees in the local environment	
	recognise that different plants live in the local environment	
	use simple identification guides to name plants in the local environment	
	identify and name a variety of common wild and garden plants, including deciduous	
	and evergreen trees	
Above	compare and contrast different plants	
ARE	sequence pictures of how plants changes over time	
	describe how deciduous trees changes throughout the year	
	explain why some plants are only seen at certain times of the year	
-1. 1	Year 1 Animals including humans	
Slightly	identify and name a selection of animals	
below	make observations of animals	
ARE	know that animals eat different types of food	
	use their observations to point out differences between humans and other animals	
	and between animals and non-living things	
	identify and locate the sense organs	
	use senses to describe textures, sounds and smells	
Broadly	identify and sort animals into different groups	
within	name the different groups of animals	
ARE	identify and name a variety of common animals including fish, amphibians, reptiles,	
	birds and mammals	
	recall and use the words: carnivore, herbivore and omnivore	
	identify and name a variety of common animals that are carnivores, herbivores and	
	omnivores	
	identify the food of some common animals	
	describe and compare the structure of a variety of common animals (fish,	
į	amphibians, reptiles, birds and mammals, including pets)	
į	compare differences in texture, sounds and smells	
	name and locate the basic parts of the human body	

coverd	ge
	draw and label a simple body outline
Above ARE	group animals that belong to: carnivores, herbivores and omnivores describe differences between the different animal groups (e.g. birds have feathers but mammals have fur) identify animals which are more likely to be seen in different seasons explain why some animals are only seen at night
	Year 1 Seasonal changes
Slightly Below ARE Broadly within ARE	name the four seasons recall simple changes associated with each season observe and name types of weather (e.g. rain, sun, wind, clouds) observe changes across the four seasons identify what to observe use descriptive words, photos and pictures to record changes collect evidence of changes (e.g. leaves, seeds, flowers) observe and describe weather associated with the seasons and how day length varies identify what to measure about the weather use prepared tables and charts to record data
Above ARE	use secondary data to describe weather in another setting explain why animals are easier to spot at different times of year (e.g. migrating birds, hibernating animals)
	Year 1 Materials- Everyday Materials
Slightly below ARE	name some common materials name some common objects around the school and home make observations of common objects and the different materials they are made of communicate these observations using descriptive words (e.g. bendy, rough, hard)
Broadly within ARE	distinguish between an object and the material from which it is made identify some naturally occurring materials: wood, rock, water identify some man-made materials: glass, metal, plastic identify and name a variety of everyday materials, including wood, plastic, glass, metal, water, and rock identify some properties of materials (e.g. see through, waterproof, absorbent) describe the simple physical properties of a variety of everyday materials compare and group together a variety of everyday materials on the basis of their simple physical properties (both visible and non-visible)
Above ARE	make predictions about which materials will float and sink name materials which have lots of different uses (e.g. paper- wrapping paper, tissue paper, writing paper, birthday card) describe objects that are made from lots of different materials names objects that are sometimes made from different materials (e.g.: spoons- plastic, wooden, metal) explain why people started using plastic bags rather than paper bags

# Long Term Planning Science

	Year 2 Plants
Slightly below ARE  know that flowering plants produce seeds which grow into new plants know that some plants have bulbs from which they grow make observations of plants over time	
Broadly within ARE	explore how plants from seeds and bulbs grow describe what happens to bulbs during the plant cycle as they grow describe what happens to a seed as it grows and develops describe what they observe as new plants grow observe and describe how seeds and bulbs grow into mature plants suggest how to find out about what plants need in order to grow well recognise that plants are living and need water, light and warmth to grow describe differences between plants grown in the light and in the dark find out and describe how plants need water, light and a suitable temperature to grow and stay healthy
Above ARE  explain how to look after a variety of plants compare the plant cycle for a plant from a seed with that from a bulb know that a seed and bulb both contain everything a plant needs to grow explain that seeds and bulbs do not need light to germinate and identify how this is diff to the needs of a plant explain how plants in the desert survive with little water and plants in the rainforest sur with little light	
	Year 2 Animals including humans
Below ARE	recognise that animals produce young notice that animals, including humans, have offspring which grow into adults recognise changes that take place as animals get older identify the offspring of a selection of different animals recognise that exercise is important name some types of food recognise that an adequate diet and exercise are necessary for them to grow and stay healthy
Broadly within ARE	describe some differences they observe between babies and toddler explain that adult animals no longer grow make comparisons of the differences they observe between babies and toddlers find out about and describe the basic needs of animals, including humans, for survival (water, food and air) describe the importance for humans of exercise, eating the right amounts of different types of food, and hygiene identify some types of food that make up their diet and name some examples of each describe some of the types of food that they eat
Above explain how to look after a pet describing what it needs to survive use evidence to show that adult animals no longer grow use evidence to show that children of the same age are not all the same size use evidence to show that older children are generally taller than younger children	

	Year 2 Living things and their habitats		
Slightly Below ARE	use their observations to point out differences between animals, plants and non-living things recognise that plants provide food for humans and other animals within an environment identify some local habitats		
, <u>c</u>	name a few of the organisms that live in a particular habitat		
Broadly within	with help, use keys to identify some animals and plants recognise that different plants live in the local environment		
ARE	describe the simple features of habitats recognise a microhabitat as a small habitat (e.g. leaf litter, woodlice under stones)		
	describe some microhabitats identify and name a variety of plants and animals in their habitats, including micro-		
	habitats recognise similarities and differences between plants and animals		
	explore and compare the differences between things that are living, dead, and things that have never been alive		
	explain differences between living and non-living things in terms of characteristics such as movement and growth		
	construct a simple food chain (e.g. grass, cow, human)		
	describe how animals obtain their food from plants and other animals, using the idea of a		
	simple food chain, and identify and name different sources of food		
	suggest reasons why different plants and animals are found in the different environments		
	identify that most living things live in habitats to which they are suited and describe how		
	different habitats provide for the basic needs of different kinds of animals and plants,		
	and how they depend on each other		
Above	compare animals found in familiar habitats with unfamiliar habitats		
ARE	compare plants found in familiar habitats with unfamiliar habitats		
	use different factors to compare a range of habitats (e.g. water, light, temperature)  Year 2 Use of Everyday Materials		
Slightly	identify uses of some common materials		
below	give a reason why a material is suitable for its job		
ARE	identify materials that can be easily changed with force		
	identify materials that cannot be easily changed with force		
	describe pushes and pulls needed to change a material as big or small		
Broadly	recognise that some materials will have more than one property which increases its suitability		
within	for its purpose (e.g. glass is transparent, rigid and weatherproof)		
ARE	identify and compare the suitability of a variety of everyday materials, including wood,		
	metal, plastic, glass, brick, rock, paper and cardboard for particular uses		
	suggest several reasons why a material may or may not be suitable for a particular purpose		
1	find out how the shapes of solid objects made from some materials can be changed by		
1	squashing, bending, twisting and stretching		
<u> </u>	describe changes in shapes as a result of the action of pushes, pulls and twists		
Above ARE	explain why some materials change shape when a force acts (i.e. push, pull, twist, stretch) as a result of their properties		
	1 - Court of the properties		

# Long Term Planning Science

Primary Schoo

We have identified these learning values as intrinsic to supporting the needs of children in our school: Reflectiveness; Risk-Taking; Stick-Ability; Communication;

Community Values; Inquisitiveness; Independence; Working Collaboratively National Curriculum Coverage

 •					
explain why one material may be	more suitable	for a purpose	than another	by discussing	
properties					
explain why plastics cause proble	ms in the ocea	ns

# Long Term Planning Science

We have identified these learning values as intrinsic to supporting the needs of children in our school: Reflectiveness; Risk-Taking; Stick-Ability; Communication;

 ${\it Community \ Values; \ Independence; \ Working \ Collaboratively \ National \ Curriculum \ Coverage}$ 

	Year 3 Plants
Slightly below ARE	identify parts of flowering plants
	<ul> <li>recognise that plants need light, water and warmth and healthy leaves, roots and stems in order to grow well</li> </ul>
	know that plants make their own food
	know that water travels from the roots up the stem
	sequence pictures to show the life cycle of a plant
Broadly within ARE	identify and describe the functions of different parts of flowering plants: roots, stem/trunk, leaves and flowers
Dioddiy Willin 71112	describe why healthy roots and a healthy stem are needed for plants to grow
	recognise that the leaves of a plant are associated with healthy growth and more specifically nutrition
	know that fertilisers contain minerals
	<ul> <li>understand that plants absorb minerals from the soil (Teacher Note: plants create their own food using sunlight, water</li> </ul>
	and carbon dioxide, they do not absorb food from the soil)
	describe how changes to light and fertiliser affect plant growth
	<ul> <li>explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow)</li> </ul>
	and how they vary from plant to plant
	investigate the way in which water is transported within plants
	<ul> <li>describe how the stem has a role in support and nutrition (transport of water)</li> <li>describe why plants need flowers</li> </ul>
	describe the role of bees and insects in pollination
	describe how pollen and seeds are dispersed
	explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation and
	seed dispersal
Above ARE	explain why healthy roots and a healthy stem are needed for plants to grow
	<ul> <li>explain that differences in plant growth are due to the amount of light and/or water</li> </ul>
	compare methods of seed dispersal
	<ul> <li>compare the roots of different plants (e.g. desert plants or rainforest tree. Teacher Note: rainforest trees have very</li> </ul>
	shallow roots as the quality of the soil is more and most of the nutrients are near the surface)
	Year 3 Animals including humans
Below ARE	identify some foods needed for a healthy and varied diet
	know they have bones and muscles in their body
	state that they and other animals have skeletons
	<ul> <li>identify animals that do not have an internal skeleton (invertebrates)</li> </ul>
	group animals with and without an internal skeleton
	recognise that their skeletons grow as they grow
Broadly within ARE	name the components of a healthy and varied diet
•	describe how their diet is balanced
	<ul> <li>identify that animals, including humans, need the right types and amount of nutrition, and that they cannot</li> </ul>
	make their own food; they get nutrition from what they eat
	describe some observable characteristics of bones
	describe the main functions of their skeletons
	<ul> <li>state that movement depends on both skeleton and muscles</li> </ul>
	<ul> <li>state that when one muscle contracts another relaxes</li> <li>identify that humans and some other animals have skeletons and muscles for support, protection and</li> </ul>
	movement
Above ARE	<ul> <li>describe an adequate and varied diet for humans, recognising that there are many ways of achieving this</li> </ul>
	<ul> <li>describe problems associated with broken bones or bones diseases</li> </ul>
	<ul> <li>describe some advantages of having an internal skeleton over no skeleton or an exoskeleton</li> <li>describe the role of different food groups</li> </ul>
	describe the fole of diliteratin tood groups     compare and contrast diets of animals including pets
	Compare and contrast diets of animals including pets
	Year 3 Rocks
Slightly below ARE	observe the characteristics of a variety of rocks
•	<ul> <li>name and describe the characteristics of several rocks</li> </ul>
	identify fossils in rocks
	understand that there are rocks under the Earths' surface
	<ul> <li>recognise that soil is a mixture of different materials and living things</li> </ul>
Broadly within ARE	classify rocks from the evidence of investigations
	explain that rocks are used for different purposes dependent on their physical properties
	<ul> <li>explain that different types of rock react differently to physical forces (e.g. water, rubbing)</li> </ul>
	compare and group together different kinds of rocks on the basis of their appearance and simple physical
	properties
	<ul> <li>describe in simple terms how fossils are formed when things that have lived are trapped within rock</li> <li>recognise that soil contains dead plants and animals</li> </ul>
	recognise that some contains dead plants and animals     recognise that there is rock under all surfaces and that soils come from rocks

··· - · · · · · · · · · · · · · · · · ·	
AL ADE	recognise that soils are made from rocks and organic matter
Above ARE	relate the simple physical properties of some rocks to their formation
	<ul> <li>explain how a model (e.g. biscuits, chocolate bars) can be used to represent sedimentary, metamorphic and igneous rocks</li> </ul>
	describe how Mary Anning discovered fossils
	explain why we do not see the soft parts of animals in fossils
	explain why we might find lots of the same types of rock in one place
	explain why certain rocks are used for different purposes and why some rocks could be used for these jobs for
	example:
	Marble- kitchen worktops or statues
	Slate roof tiles
	Granite walls
	Year 3 Light
Slightly below ARE	name a number of light sources, including the sun
Slightly below AILL	recognise that they cannot see in the dark
	state that reflections can be seen in shiny surfaces
	makes generalisations about shiny surfaces (e.g. smooth)
	recognise that light travels from a source
	recognise that when light is blocked, a shadow is formed
	make observations of changes in shadows
Broadly within ARE	describe and compare some light sources
Broadly Millim 7 lite	state that light sources are seen when light from them enters the eyes
	<ul> <li>recognise that light from the sun can be dangerous and that there are ways to protect their eyes</li> </ul>
	recognise that they need light in order to see things and that dark is the absence of light
	<ul> <li>explain that places are dark because there is no light and a light source is needed to help us see in such places</li> </ul>
	notice that light is reflected from surfaces
	<ul> <li>demonstrate light travelling using a torch and record light bouncing off a mirror</li> </ul>
	identify suitable reflective clothing for travelling in the dark
	<ul> <li>explain that they cannot see shiny objects in the dark because there are no light sources</li> </ul>
	<ul> <li>recognise that shadows are formed when the light from a light source is blocked by a solid object</li> </ul>
	<ul> <li>recognise that shadows are similar in shape to the objects forming them</li> </ul>
	<ul> <li>explain that shadows are formed when light from a source is blocked</li> </ul>
	<ul> <li>state that even transparent objects block some light and form shadows</li> </ul>
	<ul> <li>describe the difference in shadows cast by opaque, translucent and transparent materials</li> </ul>
	<ul> <li>explore how to make shadows of different shapes and sizes</li> </ul>
	find patterns in the way that the size of shadows change
Above ARE	<ul> <li>use ideas about shadows to make predictions about the shadows formed by different objects or materials</li> </ul>
	<ul> <li>describe how the length of a shadow changes throughout the day as the sun moves across the sky</li> </ul>
	<ul> <li>describe how nocturnal animals are adapted to use what little light there is or their other senses in the dark (e.g. cats,</li> </ul>
	aye-aye, lemurs)
	describe how Percy Shaw invented cat's eyes and explain their importance to road safety
	Year 3 Forces and magnets
Slightly below ARE	recognise that pushes and pulls are forces
	recognise that a force acts in a particular direction
	observe the movements, shape and direction of objects when forces act on them
	identify friction as a force
1	observe and explore how friction affects the movement of objects
	classify materials as magnetic or non-magnetic
	recall that magnets have a north and a south pole
Broadly within ARE	describe how to make a familiar object start moving by pushing or pulling
	<ul> <li>describe how to use pushes and pulls to make familiar objects speed up, slow down, change direction or shape</li> <li>produce annotated drawings showing the direction of force needed to make an object move</li> </ul>
	produce annotated grawings snowing the direction of force needed to make an object move     describe some ways in which friction between solid surfaces can be increased or decreased
	describe some ways in which indiction between solid surfaces can be increased or decreased     compare how things move on different surfaces
	compare now things move on different surfaces     observe how magnets attract or repel each other and attract some materials and not others
	compare and group together a variety of everyday materials on the basis of whether they are attracted to a
	Compare and group together a variety of every user inaterials on the basis of whether they are attracted to a magnet, and identify some magnetic materials
	describe the difference between a magnet and a magnetic material
	describe what happens when some materials are put near a magnet
	notice that some forces need contact between two objects, but magnetic forces can act at a distance
	recall that magnets have a north and a south pole     recall that magnets have a north and a south pole
	describe magnets as having two poles
	describe the direction of forces between magnets
	predict whether two magnets will attract or repel each other, depending on which poles are facing
Above ARE	describe some everyday uses of magnets
, DOVE AIL	explain that a compass works by lining up with the Earth's magnetic field
	describe how lodestone was found to be a naturally occurring magnet and was used as the first compass for
	navigation

# Long Term Planning Science

Beac	on 2 (bold skills are statutory and a key focus)  Year 4
Ideas and Questioning	<ul> <li>Ask relevant questions and use different types of scientific enquiry skills to answer them</li> <li>Explain the purposes of a variety of scientific and technological developments</li> </ul>
Planning	<ul> <li>Set up simple practical enquiries, comparative and fair tests</li> <li>Begins to make their own decisions about the most appropriate type of scientific enquiry to answer questions</li> <li>Begins to make decisions about what observations to make and how long to make them for</li> <li>Begin to choose the type of simple equipment that might be used from a reasonable range</li> <li>Use appropriate equipment and measurements with reasonable accuracy</li> <li>Recognises when a simple fair test is needed</li> <li>With help, decides how to set up a fair test and control variables</li> </ul>
Obtaining and Presenting Evidence	<ul> <li>Makes systematic and careful observations</li> <li>Makes accurate measurements using standard units, using a range of equipment, e.g. data loggers and thermometers</li> <li>Recognises when and how secondary sources might help answer questions that cannot be answered through practical investigations</li> <li>Gathers and records data in a variety of ways to help in answering questions</li> <li>Prepares own format for recording data</li> <li>Makes decisions about how to record and analyse the data</li> <li>Records and presents findings using drawings, labelled diagrams, keys, tally charts, Carroll diagrams, Venn diagrams, bar charts and tables</li> <li>Reports on findings from enquiries, in simple scientific language, using oral and written explanations, displays or presentations of results and conclusions</li> </ul>
Considering and Evaluating Evidence	<ul> <li>Uses observable and other criteria to group, sort and classify in different ways (including simple keys and branching databases)</li> <li>Identifies differences, similarities or changes related to simple scientific ideas and processes.</li> <li>With help, looks for changes, patterns and relationships in their data</li> <li>With help, uses results to draw simple conclusions and answer questions using appropriate levels of knowledge and their own experiences</li> <li>Uses straightforward scientific evidence to answer questions or the support their findings</li> <li>Uses relevant scientific language to discuss their ideas and communicate their findings</li> <li>With support, uses results to suggest improvements to what they have done</li> <li>With support, raise further questions (e.g. arising from the data)</li> <li>With support, makes predictions for new values within or beyond the data collected</li> </ul>

# Long Term Planning Science

	Year 4 Animals including humans
	(NC statement regarding food chains moved to living things and their habitats)
Below ARE	<ul> <li>identify a wider range of body parts, including some internal organs (large intestine, small intestine, brain, lungs, heart, stomach,</li> </ul>
	oesophagus)  • locate and name the different organs in the digestive system
	<ul> <li>recognise they need to take care of their teeth</li> </ul>
	name the different types of teeth
	italia ne arreta in 1966 en 1866.
Broadly within	
ARE	describe the role of each organ in the digestive system
	<ul> <li>describe the simple functions of the basic parts of the digestive system in humans</li> </ul>
	<ul> <li>describe the role of each type of teeth in digestion</li> <li>identify the different types of teeth in humans and their simple functions</li> </ul>
	explain how they should look after their teeth and recognise why they need to do so
	state that animals have different diets and may have different kinds of teeth
Above ARE	<ul> <li>explain why humans do not have a full set of adult teeth at birth</li> </ul>
	<ul> <li>explain why food needs to be broken down</li> <li>explain why dentists are concerned about the amount of sugar children have</li> </ul>
	explain why demissis are concerned about the amount of sugar criticizen have     explain how fossilised teeth give us clues about an animals' diet
	explain why the teeth of certain types of animals need to be different
	Year 4 Living things and their habitats
	Including Food chain POS statement from animals including humans
Slightly below	<ul> <li>recognise that animals can be grouped into vertebrates and invertebrates</li> </ul>
ARE	identify that some animals feed on other animals and some on plants
	<ul> <li>explore ways of grouping living things including animals and plants (flowering and non-flowering)</li> </ul>
Broadly within	<ul> <li>represent feeding relationships with simple food chains</li> <li>explore and use classification keys to help group, identify and name a variety of living things in their local and wider</li> </ul>
ARE	expire and use classification keys to help group, identify and name a variety of living fillings in their local and wider environment.
71112	<ul> <li>recognise that living things can be grouped in a variety of ways</li> </ul>
	<ul> <li>describe some of the characteristics of the vertebrate (fish, mammals, amphibians, reptiles and birds) groups (e.g. warm-blooded,</li> </ul>
	have fur, lay eggs)
	<ul> <li>group animals into vertebrate (fish, mammals, amphibians, reptiles and birds) and invertebrates groups (snails, slugs, spiders, worms</li> </ul>
	and insects)
	<ul> <li>recognise that green plants are the ultimate source of food for all animals</li> <li>recognise that a food chain must always start with a green plant (a producer)</li> </ul>
	<ul> <li>represent feeding relationships within a habitat with food chains beginning with a green plant which 'produces' food for the other</li> </ul>
	organisms
	<ul> <li>use and understand the terms: producer, predator and prey</li> </ul>
	<ul> <li>construct and interpret a variety of food chains, identifying producers, predators and prey (Teacher Note: statement moved</li> </ul>
	from NC 'Animals including humans' to improve progression within topics)
	<ul> <li>know the function of some of the more complex features which aid survival in specific habitats (e.g. gills, blubber, camouflage)</li> </ul>
	<ul> <li>describe why different animals and plants live in different habitats</li> <li>recognise that environments can change and that this can sometimes pose dangers to living things</li> </ul>
	describe how humans can cause changes to environments
	explain that different organisms are found in different habitats because of differences in environmental factors
Above ARE	<ul> <li>use food chains to predict what might happen to the numbers of an organism if there are suddenly more predators or less prey</li> </ul>
	<ul> <li>explain why it is necessary to use a reasonably large sample when investigating the preferences of small invertebrates</li> </ul>
	<ul> <li>describe how humans have negatively impacted environments (e.g. pollution, deforestation, introduction of invasive species)</li> </ul>
	<ul> <li>explain why some animals are hard to classify (e.g. platypus, echidna, bat, flightless birds)</li> </ul>
	Year 4 Materials- Solids, liquids and gases
Slightly below	name some solids and liquids
ARE	state that air is a gas
	state some differences between solids, liquids and gases
	<ul> <li>observe what happens to a variety of materials when they are heated (e.g. chocolate, ice cream, butter, water)</li> <li>describe what happens to water when it is heated and cooled</li> </ul>
	describe with happens to water when it is neared and cooled     recognise that these processes can be reversed
	state that ice, water and steam are the same material
	<ul> <li>identify the processes of melting, freezing, evaporation and condensation</li> </ul>
Broadly within ARE	<ul> <li>recognise everyday substances as mixtures of solids, liquids and/or gases</li> </ul>
	<ul> <li>recognise that air is a material and that it is one of a range of gases which have important uses</li> </ul>
	recognise that gases flow from place to place
	<ul> <li>know that gases can be easily compressed</li> </ul>
	<ul> <li>describe the differences between solids and liquids</li> </ul>

		1
	•	make clear distinctions between the properties of solids, liquids and gases
	•	identify a wide range of contexts in which changes of state take place
		describe a few examples where these changes occur
	_	
	•	recognise that for a substance to be detected by smell, some of it must be in the gas state
	•	observe that some materials change state when they are heated or cooled, and measure or research the temperature at
		which this happens in degrees Celsius (°C)
		describe how when ice melts it turns to liquid and how when water freezes it becomes ice
		describe how these processes can be reversed
	·	
	•	describe how liquids evaporate to form gases and how gases condense to form liquids
	•	sequence the changes that happen in the water cycle
	•	describe the water cycle in terms of these processes
		explain the relationship between liquids and solids in terms of melting and freezing
		explain the relationship between liquids and gases in terms of evaporation and condensation
	-	
	•	identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with
		temperature
	•	know that temperature can affect the rate of evaporation or condensation
		describe the effect of temperature on evaporation
		explain how changing conditions affects processes such as evaporation and condensation
	•	identify a range of contexts in which changes take place (e.g. evaporation of puddles in the school playground or from clothes on the
		washing line, condensation in the bathroom)
Above ARE	•	describe the behaviour and properties of gases
		make clear distinctions between the properties of solids, liquids and gases
		explain why granular solids have some of the properties associated with liquids
	-	
	•	explain why some substances are hard to classify as solids, liquids and gases (e.g. whipped cream, mousse, mayonnaise, muddy water,
		fizzy drinks, cornflour and water)
	•	compare the boiling point of different liquids
		explore the effect of salt on ice
		explain why salt is put on the roads in winter
	·	explain why sain is put on the roads in white.
	Year 4 Sound	
Slightly below	•	recognise and describe many sounds and sound sources
ARE		state that they hear sounds through their ears
		recognise that when sounds are generated by objects, something moves or vibrates
	·	
	•	describe differences in pitch and volume
	•	describe what they observe when they move further away from a source of sound
Broadly within	•	identify how sounds are made, associating some of them with something vibrating
ARE		identify what is vibrating in a range of musical instruments
		generalise that sounds are produced when objects vibrate
	_	describe how sounds are generated by specific objects
	•	
	•	suggest ways of producing sounds
	•	recognise that vibrations from sounds travel through a medium to the ear
	•	find patterns between the pitch of a sound and features of the object that produced it
		distinguish between pitch and volume (loudness)
		know that altering vibrations alters the pitch or volume
	_	suggest how to change the loudness of the sounds produced by a range of musical instruments
	•	
	•	explore how to vary the pitch and volume of sounds from a variety of objects or instruments
	•	find patterns between the volume of a sound and the strength of the vibrations that produced it
	•	recognise that sounds get fainter as the distance from the sound source increases
		describe what they observe when they move further away from the source of a sound
Above ARE		describe ways in which the pitch of a sound made by a particular instrument or vibrating object can be raised or lowered
ADOVE AKE	-	
	•	generalise the effects of changes on sound (e.g. the tighter the tension the higher the pitch)
		group instruments independently by the way sounds are produced
	•	recognise that sounds travel through solids, water and air
	:	explore how sound travels through a variety of materials
	:	explore how sound travels through a variety of materials identify suitable materials to use for sound insulation
	•	explore how sound travels through a variety of materials identify suitable materials to use for sound insulation recognise that sound can be reflected from a surface which can cause an echo
		explore how sound travels through a variety of materials identify suitable materials to use for sound insulation recognise that sound can be reflected from a surface which can cause an echo describe how some animals use echo-location
	Year 4 Electric	explore how sound travels through a variety of materials identify suitable materials to use for sound insulation recognise that sound can be reflected from a surface which can cause an echo describe how some animals use echo-location
Slightly below	Year 4 Electric	explore how sound travels through a variety of materials identify suitable materials to use for sound insulation recognise that sound can be reflected from a surface which can cause an echo describe how some animals use echo-location
Slightly below ARE	Year 4 Electric	explore how sound travels through a variety of materials identify suitable materials to use for sound insulation recognise that sound can be reflected from a surface which can cause an echo describe how some animals use echo-location its common appliances that run on electricity
	Year 4 Electric	explore how sound travels through a variety of materials identify suitable materials to use for sound insulation recognise that sound can be reflected from a surface which can cause an echo describe how some animals use echo-location  ity identify common appliances that run on electricity identify mains operated and battery operated devices
	Year 4 Electric	explore how sound travels through a variety of materials identify suitable materials to use for sound insulation recognise that sound can be reflected from a surface which can cause an echo describe how some animals use echo-location ity  identify common appliances that run on electricity identify mains operated and battery operated devices describe some of the dangers associated with mains electricity
	Year 4 Electric	explore how sound travels through a variety of materials identify suitable materials to use for sound insulation recognise that sound can be reflected from a surface which can cause an echo describe how some animals use echo-location stry identify common appliances that run on electricity identify mains operated and battery operated devices describe some of the dangers associated with mains electricity name some components of a simple electrical circuit

# Long Term Planning Science

and school

We have identified these learning values as intrinsic to supporting the needs of children in our school: Reflectiveness; Risk-Taking; Stick-Ability; Communication;

 		-				
•	describe the effect	of making and breaking	one of the conto	icts on a circuit		
•	explain why some circ	cuits work and others d	o not			
•	recognise that a swi	itch opens and closes o	a circuit and ass	ociate this with	whether or not a lamp lights in a si	mple series
	circuit					
	describe how switche	es work				
	construct a home-ma	de switch				
•	construct simple circ	uits and use them to te	st whether mate	rials are electrica	al conductors or insulators	
•	recognise some comm	mon conductors and ins	sulators, and as	sociate metals wi	th being good conductors	

Above ARE	<ul> <li>are methodical in tracing faults in simple circuits</li> <li>relate knowledge about conductors and insulators to their use in electrical appliances</li> <li>describe the use of conductors and insulators in components including connecting wires</li> <li>identify graphite and playdough as non-metal conductors and explain why this is unusual</li> </ul>

# Long Term Planning Science

Briman School

We have identified these learning values as intrinsic to supporting the needs of children in our school: Reflectiveness; Risk-Taking; Stick-Ability; Communication;

Commun		isitiveness: Independence; Working Collaboratively INACIONAL CUPTICUIUM COVERAGE
W	Ideas and	<ul> <li>Uses their scientific experiences to explore ideas and raise different types of questions</li> </ul>
	Questioning	Talks about how scientific ideas have developed over time
0		Recognises the applications of specific scientific ideas
r	Planning	<ul> <li>Selects and plans different types of scientific enquiries to answer questions</li> </ul>
		<ul> <li>Makes decisions about what observations to make, what measurements to use, how long to make them for and whether to repeat them</li> </ul>
k		• Chooses the most appropriate equipment to make measurements
i		Explains how to use the equipment accurately
•		Recognises when and how to set up comparative and fair tests
n		Recognises and controls variables where necessary (e.g. explains which variables need to be controlled and why)
		Takes measurements, in standard units, using a range of scientific equipment, with increasing accuracy and precision
9	Obtaining	Takes repeat readings where appropriate  Output  Description of the second
S	and	Recognises which secondary sources will be most useful to research their ideas  Project to any project of the control of
	Presenting	<ul> <li>Begins to separate opinion from fact</li> <li>Records data and results of increasing complexity</li> </ul>
С	Evidence	<ul> <li>Records data and results of increasing complexity</li> <li>Decides how to record data from a choice of familiar approaches</li> </ul>
i		Calculates mean value where appropriate
	Considering	Records and presents findings using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs
e	•	• Reports on findings from enquiries, using relevant scientific language and conventions, in oral and written explanations such as displays and other presentations
n	and	Uses and develops keys and other information records to identify, classify and describe living things and materials
_	Evaluating	Identifies conclusions, causal relationships and explanations of results
†	Evidence	Identifies patterns that might be found in the natural environment
i		Draws valid conclusions, explains and interprets the results (including the degree of trust) using scientific knowledge and understanding (e.g. recognises limitations of data)
£		<ul> <li>Identifies scientific evidence that has been used to support or refute ideas or arguments</li> </ul>
T		<ul> <li>Uses relevant scientific language and illustrations to discuss, communicate and justify their scientific ideas</li> </ul>
i		<ul> <li>Makes practical suggestions about how their working method could be improved (e.g. sample size on reliability)</li> </ul>
		<ul> <li>Uses results to identify when further tests and observations might be needed</li> </ul>

# Long Term Planning Science

We have identified these learning values as intrinsic to supporting the needs of children in our school: Reflectiveness; Risk-Taking; Stick-Ability; Communication;

	Year 5 Combined topics:  Living things and their habitats including statement from Animals including humans to enable progression within a topic and greater
	coherence between ideas
Slightly below	sequence the life cycles of a variety of plants and animals
ARE	name the parts of a flower
	name the parts of the human reproductive system
	identify ways in which the appearance of humans changes as they get older
	identify some characteristics that will not change with age
	recognise stages in growth and development of humans including puberty
	- recognise stages in growin and development or numeris including paperty
Broadly within	
ARE	<ul> <li>recognise the similarities in the life cycles of plants, animals and humans</li> </ul>
	<ul> <li>describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird</li> </ul>
	describe the functions of some parts of a flower
	describe the main functions of parts of a plant involved in reproduction
	describe the processes of sexual and asexual reproduction in plants
	<ul> <li>describe the simple functions of parts of the human reproductive system</li> </ul>
	<ul> <li>describe the life process of reproduction in some plants and animals</li> </ul>
	compare methods of seed dispersal
	know that most animals reproduce by sexual reproduction
	describe the changes as humans develop to old age (Teacher note: statement taken from year 5 'Animals including
	humans' programme of study)
	numans programme or study)
Above ARE	compare internal and external fertilisation in animals
	<ul> <li>explain that living things need to reproduce if the species is to survive</li> </ul>
	compare gestation periods (pregnancy) of different animals
	explain what is unusual about the life cycle of a kangaroo or koala
	Year 5 Materials-Properties of Materials
Slightly below	<ul> <li>observe and explore the properties of materials (e.g. hardness, transparency, magnetism, electrical and thermal conductivity</li> </ul>
ARE	identify some materials that are good thermal insulators and some everyday uses of these
	recognise that metals are both good thermal and good electrical conductors
	recognise that salt or sugar dissolves in water but sand won't
	recognise that dissolving is a reversible change
	recognise that changes of state are reversible
	recognise the hazards of burning materials
Broadly within	
ARE	<ul> <li>suggest why particular materials are used for different jobs depending on their properties</li> </ul>
· · · · <del>-</del>	<ul> <li>compare and group together everyday materials on the basis of their properties, including their hardness, solubility</li> </ul>
	transparency, conductivity (electrical and thermal), and response to magnets
	<ul> <li>give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials,</li> </ul>
	including metals, wood and plastic
	<ul> <li>name some materials that will and some that will not dissolve in water</li> </ul>
	<ul> <li>recognise that although it is not possible to see a dissolved solid, it remains in the solution</li> </ul>
	<ul> <li>describe melting and dissolving and give everyday examples of each</li> </ul>
	<ul> <li>identify and explore factors that affect the rate at which a solid dissolves</li> </ul>
	identify and explore factors that affect the rate at which a solid dissolves     separate an undissolved solid from a liquid by filtering
	<ul> <li>separate an undissolved solid from a liquid by filtering</li> </ul>
	<ul> <li>separate an undissolved solid from a liquid by filtering</li> <li>recognise that an undissolved solid can be separated from liquid by filtering</li> </ul>
	separate an undissolved solid from a liquid by filtering     recognise that an undissolved solid can be separated from liquid by filtering     recognise that a solid can be recovered from a solution by evaporation
	<ul> <li>separate an undissolved solid from a liquid by filtering</li> <li>recognise that an undissolved solid can be separated from liquid by filtering</li> <li>recognise that a solid can be recovered from a solution by evaporation</li> <li>describe the properties of mixtures which can be separated by filtration</li> </ul>
	separate an undissolved solid from a liquid by filtering     recognise that an undissolved solid can be separated from liquid by filtering     recognise that a solid can be recovered from a solution by evaporation     describe the properties of mixtures which can be separated by filtration     describe some methods that are used to separate simple mixtures
	separate an undissolved solid from a liquid by filtering     recognise that an undissolved solid can be separated from liquid by filtering     recognise that a solid can be recovered from a solution by evaporation     describe the properties of mixtures which can be separated by filtration     describe some methods that are used to separate simple mixtures     explain that when solids dissolve they break up so small they can pass through the holes in the filter paper
	separate an undissolved solid from a liquid by filtering     recognise that an undissolved solid can be separated from liquid by filtering     recognise that as solid can be recovered from a solution by evaporation     describe the properties of mixtures which can be separated by filtration     describe some methods that are used to separate simple mixtures through the holes in the filter paper     explain that when solids dissolve they break up so small they can pass through the holes in the filter paper     know that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a

	separate an undissolved solid from a liquid by filtering     recognise that an undissolved solid can be separated from liquid by filtering     recognise that a solid can be recovered from a solution by evaporation     describe some methods that are used to separated by filtration     describe some methods that are used to separated by filtration     describe some methods that are used to separated by filtration     describe some methods that are used to separated symple mixtures     explain that when solids dissolve they break up so small they can pass through the holes in the filter paper     know that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a     solution     use knowledge about how a specific mixture can be separated to suggest ways in which other similar mixtures might be     separated     use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering,     sieving and evaporating     recognise that some changes can be reversed and some cannot     demonstrate that dissolving, mixing and changes of state are reversible changes     observe and explore a variety of chemical changes of state are reversible changes     observe and explore a variety of chemical changes (e.g. burning)     identify whether some changes are reversible or not     classify some changes as reversible or not     classify some changes as reversible or and the same irreversible (e.g. burning)
	separate an undissolved solid from a liquid by filtering     recognise that an undissolved solid can be separated from liquid by filtering     recognise that a solid can be recovered from a solution by evaporation     describe the properties of mixtures which can be separated by filtration     describe some methods that are used to separate simple mixtures     explain that when solids dissolve they break up so small they can pass through the holes in the filter paper     know that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a     solution     use knowledge about how a specific mixture can be separated to suggest ways in which other similar mixtures might be     separated     use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering,     sieving and evaporating     recognise that some changes can be reversed and some cannot     demonstrate that dissolving, mixing and changes of state are reversible changes     observe and explore a variety of chemical changes (e.g. burning)     identify whether some changes are reversible or not

	<ul> <li>explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda</li> <li>explain that in some cases the new materials made are gases and identify some evidence for the production of gases (e.g. vigorous bubbling)</li> </ul>
Above ARE	<ul> <li>describe the difference between melting and dissolving</li> <li>recognise that inks and dyes are often mixtures of different colours and these can be separated by chromatography</li> </ul>
	<ul> <li>explain why ink or dye moves up the paper in chromatography</li> <li>describe the properties of new materials (e.g. aerogel, silly putty, wrinkle-free cotton)</li> <li>explain why some materials are good thermal insulators</li> </ul>
	Year 5 Earth and Space
Slightly below	<ul> <li>identify and name the components of the solar system (i.e. Sun, Moon, Earth and other planets)</li> </ul>
ARE	locate the Sun, Earth and other planets in the solar system
	<ul> <li>recognise that the Earth and other planets orbit the Sun</li> </ul>
	recall that the Earth takes one year to orbit the Sun
	<ul> <li>recall that the Earth rotates on its' axis and this takes one day</li> </ul>
	recognise that the Moon orbits the Earth
Depodly within	<ul> <li>recall that a shadow from the Sun changes over the course of a day</li> <li>describe the movement of the Earth, and other planets, relative to the Sun in the solar system</li> </ul>
Broadly within ARE	describe the movement of the Moon relative to the Earth, and other planets, relative to the Sun in the solar system     describe the movement of the Moon relative to the Earth
ANL	describe the Sun, Earth and Moon as approximately spherical bodies
	<ul> <li>recognise that the Earth, Sun and Moon are spherical and support this with some evidence</li> </ul>
	<ul> <li>recognise that it is daylight in the part of the Earth facing the Sun</li> </ul>
	<ul> <li>explore and describe how a shadow from the Sun changes over the course of a day</li> </ul>
	<ul> <li>explain in terms of the rotation of the Earth why shadows change and the Sun appears to move across the sky during the</li> </ul>
	course of the day
	<ul> <li>use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky</li> <li>explain why it is night time in Australia when it is day time in England</li> </ul>
Above ARE	explain that gravity is a force of attraction and it is what holds the planets in orbit around the Sun and the Moon in orbit     explain that gravity is a force of attraction and it is what holds the planets in orbit around the Sun and the Moon in orbit
	around the Earth
	<ul> <li>explain that the changes in the appearance of the Moon over a period of 28 days arise from the Moon orbiting the Earth or explain 28 days.</li> </ul>
	<ul> <li>every 28 days</li> <li>use simple physical models to explain effects that are caused by the movement of the Earth</li> </ul>
	use simple physical middles to explain effects that are caused by the invertient of the Earth     explain how ideas about the solar system have changed over time
	Year 5 Forces
Slightly below	identify that force is measured in Newtons
ARE	<ul> <li>name simple forces such as gravity, friction and air resistance</li> </ul>
	<ul> <li>recognise that more than one force can act on an object</li> </ul>
	recognise that air resistance slows things down
	recognise that friction can be useful or not useful
Broadly within	<ul> <li>identify weight as a force</li> <li>draw force diagrams with arrows showing the direction of forces acting on an object</li> </ul>
ARE	
	observe and explore the effect of several forces on objects
	<ul> <li>observe and explore the effect of several forces on objects</li> <li>identify the effects of air resistance, water resistance and friction, that act between moving surfaces</li> </ul>
	<ul> <li>observe and explore the effect of several forces on objects</li> <li>identify the effects of air resistance, water resistance and friction, that act between moving surfaces</li> <li>describe some situations in which there is more than once force acting on an object</li> </ul>
	<ul> <li>observe and explore the effect of several forces on objects</li> <li>identify the effects of air resistance, water resistance and friction, that act between moving surfaces</li> </ul>
	<ul> <li>observe and explore the effect of several forces on objects</li> <li>identify the effects of air resistance, water resistance and friction, that act between moving surfaces describe some situations in which there is more than once force acting on an object describe and explain the motion of some familiar objects in terms of several forces acting on them identify forces on an object as either balanced or unbalanced</li> <li>use the terms 'balanced' and unbalanced' when describing several forces on an object</li> </ul>
	observe and explore the effect of several forces on objects     identify the effects of air resistance, water resistance and friction, that act between moving surfaces     describe some situations in which there is more than once force acting on an object     describe and explain the motion of some familiar objects in terms of several forces acting on them     identify forces on an object as either balanced or unbalanced     use the terms 'balanced' and unbalanced' when describing several forces on an object     explain that balanced forces on an object cause it to remain stationary or travel at the same speed
	observe and explore the effect of several forces on objects     identify the effects of air resistance, water resistance and friction, that act between moving surfaces     describe some situations in which there is more than once force acting on an object     describe and explain the motion of some familiar objects in terms of several forces acting on them     identify forces on an object as either balanced or unbalanced     use the terms 'balanced' and unbalanced' when describing several forces on an object     explain that balanced forces on an object cause it to remain stationary or travel at the same speed     explain that unbalanced forces on an object cause it to remain stationary or travel or the same speed     explain that unbalanced forces on an object cause it to repare to, change shape or slow down
	observe and explore the effect of several forces on objects     identify the effects of air resistance, water resistance and friction, that act between moving surfaces describe some situations in which there is more than once force acting on an object describe and explain the motion of some familiar objects in terms of several forces acting on them identify forces on an object as either balanced or unbalanced     use the terms 'balanced' and unbalanced' when describing several forces on an object explain that balanced forces on an object cause it to remain stationary or travel at the same speed explain that unbalanced forces on an object cause it to speed up, change shape or slow down explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth a
	observe and explore the effect of several forces on objects     identify the effects of air resistance, water resistance and friction, that act between moving surfaces     describe some situations in which there is more than once force acting on an object     describe and explain the motion of some familiar objects in terms of several forces acting on them     identify forces on an object as either balanced or unbalanced     use the terms 'balanced' and unbalanced' when describing several forces on an object     explain that balanced forces on an object cause it to remain stationary or travel at the same speed     explain that unbalanced forces on an object cause it to speed up, change shape or slow down     explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth a     the falling object
	observe and explore the effect of several forces on objects     identify the effects of air resistance, water resistance and friction, that act between moving surfaces     describe some situations in which there is more than once force acting on an object     describe and explain the motion of some familiar objects in terms of several forces acting on them     identify forces on an object as either balanced or unbalanced     use the terms 'balanced' and unbalanced' when describing several forces on an object     explain that balanced forces on an object cause it to remain stationary or travel at the same speed     explain that unbalanced forces on an object cause it to speed up, change shape or slow down     explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth a     the falling object     understand that air resistance is the frictional force of air on objects moving through it
	observe and explore the effect of several forces on objects     identify the effects of air resistance, water resistance and friction, that act between moving surfaces     describe some situations in which there is more than once force acting on an object     describe and explain the motion of some familiar objects in terms of several forces acting on them     identify forces on an object as either balanced or unbalanced     use the terms 'balanced' and unbalanced' when describing several forces on an object     explain that balanced forces on an object cause it to remain stationary or travel at the same speed     explain that unbalanced forces on an object cause it to speed up, change shape or slow down     explain that unbalanced objects fall towards the Earth because of the force of gravity acting between the Earth a     the falling object     understand that air resistance is the frictional force of air on objects moving through it     describe some of the factors that increase friction between solid surfaces and increase air and water resistance
	observe and explore the effect of several forces on objects     identify the effects of air resistance, water resistance and friction, that act between moving surfaces     describe some situations in which there is more than once force acting on an object     describe and explain the motion of some familiar objects in terms of several forces acting on them     identify forces on an object as either balanced or unbalanced     use the terms 'balanced' and unbalanced' when describing several forces on an object     explain that balanced forces on an object cause it to remain stationary or travel at the same speed     explain that unbalanced forces on an object cause it to speed up, change shape or slow down     explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth a     the falling object     understand that air resistance is the frictional force of air on objects moving through it     describe some of the factors that increase friction between solid surfaces and increase air and water resistance     describe situations in which frictional forces are helpful as well as those in which frictional forces are unhelpful
	boserve and explore the effect of several forces on objects describe some of the effects of air resistance, water resistance and friction, that act between moving surfaces describe some situations in which there is more than once force acting on an object describe and explain the motion of some familiar objects in terms of several forces acting on them identify forces on an object as either balanced or unbalanced use the terms 'balanced' and unbalanced' when describing several forces on an object explain that balanced forces on an object cause it to remain stationary or travel at the same speed explain that unbalanced forces on an object cause it to speed up, change shape or slow down explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth at the falling object understand that ail resistance is the frictional force of air on objects moving through it describe some of the factors that increase friction between solid surfaces and increase air and water resistance describe situations in which frictional forces are helpful as well as those in which frictional forces are unhelpful explore the effects of levers, pulleys and gears
Δουνα ΔΡΕ	boserve and explore the effect of several forces on objects identify the effects of air resistance, water resistance and friction, that act between moving surfaces describe some situations in which there is more than once force acting on an object describe and explain the motion of some familiar objects in terms of several forces acting on them identify forces on an object as either balanced or unbalanced use the terms 'balanced' and unbalanced' when describing several forces on an object explain that balanced forces on an object cause it to remain stationary or travel at the same speed explain that unbalanced forces on an object cause it to remain stationary or travel at the same speed explain that unbalanced forces on an object cause it to speed up, change shape or slow down explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth a the falling object understand that air resistance is the frictional force of air on objects moving through it describe some of the factors that increase friction between solid surfaces and increase air and water resistance describe situations in which frictional forces are helpful as well as those in which frictional forces are unhelpful explore the effects of levers, pulleys and gears recognise that some mechanisms, including levers, pulleys and gears, allow a smaller force to have a greater effects.

Above ARE	boserve and explore the effect of several forces on objects identify the effects of air resistance, water resistance and friction, that act between moving surfaces describe some situations in which there is more than once force acting on an object describe and explain the motion of some familiar objects in terms of several forces acting on them identify forces on an object as either balanced or unbalanced use the terms 'balanced' and unbalanced' when describing several forces on an object explain that balanced forces on an object cause it to remain stationary or travel at the same speed explain that unbalanced forces on an object cause it to speed up, change shape or slow down explain that unbalanced objects fall towards the Earth because of the force of gravity acting between the Earth a the falling object understand that air resistance is the frictional force of air on objects moving through it describe some of the factors that increase friction between solid surfaces and increase air and water resistance describe situations in which frictional forces are helpful as well as those in which frictional forces are unhelpful explore the effects of levers, pulleys and gears are used in everyday life (e.g. having gears can make it easier to pedal a bike, a bottle opener makes it easier to open a bottle lid) explain how introducing gears onto bikes has changed cycling compare the tread on bicycle tyres according to how much friction they need
Above ARE	boserve and explore the effect of several forces on objects identify the effects of air resistance, water resistance and friction, that act between moving surfaces describe some situations in which there is more than once force acting on an object describe and explain the motion of some familiar objects in terms of several forces acting on them identify forces on an object as either balanced or unbalanced use the terms 'balanced' and unbalanced' when describing several forces on an object explain that balanced forces on an object cause it to remain stationary or travel at the same speed explain that unbalanced forces on an object cause it to remain stationary or travel at the same speed explain that unsulaported objects fall towards the Earth because of the force of gravity acting between the Earth a the falling object understand that air resistance is the frictional force of air on objects moving through it describe some of the factors that increase friction between solid surfaces and increase air and water resistance describe situations in which frictional forces are helpful as well as those in which frictional forces are unhelpful explore the effects of levers, pulleys and gears are used in everyday life (e.g. having gears can make it easier to pedal a bike, a bottle opener makes it easier to open a bottle lid)  explain how introducing gears onto bikes has changed cycling

# Long Term Planning Science

Briman School

We have identified these learning values as intrinsic to supporting the needs of children in our school: Reflectiveness; Risk-Taking; Stick-Ability; Communication;

,	Beacon 3 (bold skills are statutory and a key focus)	Year 6		
W Ideas of Question Plannink i	Talks about how scientific ideas have developed over time Recognises the applications of specific scientific ideas  Selects and plans different types of scientific enquiries to answer questions Makes decisions about what observations to make, what measurements to use, how long to make them for and whether to repeat them Chooses the most appropriate equipment to make measurements Explains how to use the equipment accurately Recognises when and how to set up comparative and fair tests Recognises and controls variables where necessary (e.g. explains which variables need to be controlled and why)			
9 Obtaini S and Present Evidence	<ul> <li>Takes measurements, in standard units, using a range of scientific equipment, in the scientific equipment equipment, in the scientific equipment equipment equipment, in the scientific equipment equipment equipment, in the scientific equipment equi</li></ul>	with increasing accuracy and precision		
e Consider and Evaluat t Evidence i f i c a I y S k i I s	<ul> <li>Records and presents findings using scientific diagrams and labels, classificat</li> <li>Reports on findings from enquiries, using relevant scientific language and conver</li> <li>Uses and develops keys and other information records to identify, classify and de</li> <li>Identifies conclusions, causal relationships and explanations of results</li> <li>Identifies patterns that might be found in the natural environment</li> </ul>	ntions, in oral and written explanations such as displays and other presentations ascribe living things and materials  of trust) using scientific knowledge and understanding (e.g. recognises limitations of data) or arguments stify their scientific ideas e.g. sample size on reliability)		

# Long Term Planning Science

	Year 6 Animals including humans
Below	<ul> <li>identify and name the parts of the circulatory system</li> </ul>
ARE	<ul> <li>know that the heart is made of muscle</li> </ul>
	<ul> <li>state how to measure pulse rate</li> </ul>
	<ul> <li>recognise that pulse rate is a measure of how fast the heart is beating</li> </ul>
	<ul> <li>identify some of the harmful effects of smoking</li> </ul>
	<ul> <li>identify food as a fuel for the body</li> </ul>
Broadly	describe what the heart and blood vessels do
within	describe what the heart and blood vessels do
ARE	
/IKC	<ul> <li>identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood</li> </ul>
	vessels and blood
	<ul> <li>discover that during exercise the heart beats faster to take blood more rapidly to the muscles</li> </ul>
	<ul> <li>make careful measurements of pulse rate</li> </ul>
	<ul> <li>describe the different functions of the blood (e.g. transporting and protecting)</li> </ul>
	<ul> <li>know that the blood comes from the heart in arteries and returns to the heart in veins</li> </ul>
	<ul> <li>know that blood carries oxygen and other essential materials around the body</li> </ul>
	<ul> <li>recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function describe the ways in</li> </ul>
	which nutrients and water are transported within animals, including humans
	<ul> <li>recognise that care needs to be taken with medicines and that they can be dangerous</li> </ul>
	<ul> <li>give several reasons why it is sometimes necessary to take medicines</li> </ul>
	identify some harmful effects of drugs
	<ul> <li>name the major groups into which food is categorised and identify sources for each group</li> </ul>
	<ul> <li>describe the main function of organs of the human body</li> </ul>
Above	<ul> <li>explain the effect of diet on particular organs of the body / aspects of health</li> </ul>
ARE	<ul> <li>explain the effect of exercise on particular organs of the body/aspects of health</li> </ul>
	<ul> <li>explain how ideas about the circulatory system have changed over time</li> </ul>
	<ul> <li>explain how ideas about smoking have changed over time</li> </ul>
	explain why advice on diet changes
	(e.g. butter vs margarine, five a day, tax on sugary drinks)
-10-1-1	Year 6 Living things and their habitats
Slightly	the state of the s
below	<ul> <li>recognise that there is a wide variety of living things</li> </ul>
ARE	identify vertebrates and invertebrates
	<ul> <li>name and describe the five vertebrate groups</li> </ul>
	<ul> <li>understand there are living things that are too small to be seen and these can affect our lives</li> </ul>
	<ul> <li>recognise that there are many micro-organisms, some which can cause illness or decay</li> </ul>
Broadly	understand why classification is important
within	<ul> <li>describe how living things are classified into broad groups according to common observable characteristics and based</li> </ul>
ARE	on similarities and differences, including micro-organisms, plants and animals
	<ul> <li>give reasons for classifying plants and animals based on specific characteristics</li> </ul>
	<ul> <li>recognise that there are useful micro-organisms which can be used in food production</li> </ul>
	<ul> <li>describe how micro-organisms feed, grow and reproduce like other organisms</li> </ul>
	<ul> <li>describe how micro-organisms feed, grow and reproduce like other organisms</li> <li>describe evidence, from investigations, that yeast is living</li> </ul>
	<ul> <li>describe how micro-organisms feed, grow and reproduce like other organisms</li> </ul>
Aban	<ul> <li>describe how micro-organisms feed, grow and reproduce like other organisms</li> <li>describe evidence, from investigations, that yeast is living</li> <li>explain how micro-organisms can move from one food source to another or from one animal to another</li> </ul>
	describe how micro-organisms feed, grow and reproduce like other organisms describe evidence, from investigations, that yeast is living explain how micro-organisms can move from one food source to another or from one animal to another  devise own keys to classify organisms and objects
	describe how micro-organisms feed, grow and reproduce like other organisms describe evidence, from investigations, that yeast is living explain how micro-organisms can move from one food source to another or from one animal to another  devise own keys to classify organisms and objects describe early ideas about classification (e.g. Aristotle)
	describe how micro-organisms feed, grow and reproduce like other organisms describe evidence, from investigations, that yeast is living explain how micro-organisms can move from one food source to another or from one animal to another  devise own keys to classify organisms and objects describe early ideas about classification (e.g. Aristotle) compare the rate of reproduction in microorganisms to other animals
	describe how micro-organisms feed, grow and reproduce like other organisms describe evidence, from investigations, that yeast is living explain how micro-organisms can move from one food source to another or from one animal to another  devise own keys to classify organisms and objects describe early ideas about classification (e.g. Aristotle) compare the rate of reproduction in microorganisms to other animals describe how the development of the microscope has contributed to our understanding of microorganisms
	describe how micro-organisms feed, grow and reproduce like other organisms describe evidence, from investigations, that yeast is living explain how micro-organisms can move from one food source to another or from one animal to another  devise own keys to classify organisms and objects describe early ideas about classification (e.g. Aristotle) compare the rate of reproduction in microorganisms to other animals describe how the development of the microscope has contributed to our understanding of microorganisms describe how ideas about hygiene have changed over time (e.g. Semmelweis)
ARE	describe how micro-organisms feed, grow and reproduce like other organisms describe evidence, from investigations, that yeast is living explain how micro-organisms can move from one food source to another or from one animal to another  devise own keys to classify organisms and objects describe early ideas about classification (e.g. Aristotle) compare the rate of reproduction in microorganisms to other animals describe how the development of the microscope has contributed to our understanding of microorganisms
ARE Slightly	describe how micro-organisms feed, grow and reproduce like other organisms describe evidence, from investigations, that yeast is living explain how micro-organisms can move from one food source to another or from one animal to another  devise own keys to classify organisms and objects describe early ideas about classification (e.g. Aristotle) compare the rate of reproduction in microorganisms to other animals describe how the development of the microscope has contributed to our understanding of microorganisms describe how ideas about hygiene have changed over time (e.g. Semmelweis)  Year 6 Evolution and Inheritance
ARE Slightly below	describe how micro-organisms feed, grow and reproduce like other organisms describe evidence, from investigations, that yeast is living explain how micro-organisms can move from one food source to another or from one animal to another  devise own keys to classify organisms and objects describe early ideas about classification (e.g. Aristotle) compare the rate of reproduction in microorganisms to other animals describe how the development of the microscope has contributed to our understanding of microorganisms describe how ideas about hygiene have changed over time (e.g. Semmelweis)  Year 6 Evolution and Inheritance  recognise variation in different species (e.g. dogs, horses)
ARE Slightly below	describe how micro-organisms feed, grow and reproduce like other organisms describe evidence, from investigations, that yeast is living explain how micro-organisms can move from one food source to another or from one animal to another  devise own keys to classify organisms and objects describe early ideas about classification (e.g. Aristotle) compare the rate of reproduction in microorganisms to other animals describe how the development of the microscope has contributed to our understanding of microorganisms describe how ideas about hygiene have changed over time (e.g. Semmelweis)  Year 6 Evolution and Inheritance recognise variation in different species (e.g. dogs, horses) describe how animals and plants are adapted to their environments
Above ARE Slightly below ARE	describe how micro-organisms feed, grow and reproduce like other organisms describe evidence, from investigations, that yeast is living explain how micro-organisms can move from one food source to another or from one animal to another  devise own keys to classify organisms and objects describe early ideas about classification (e.g. Aristotle) compare the rate of reproduction in microorganisms to other animals describe how the development of the microscope has contributed to our understanding of microorganisms describe how ideas about hygiene have changed over time (e.g. Semmelweis)  Year 6 Evolution and Inheritance  recognise variation in different species (e.g. dogs, horses) describe how animals and plants are adapted to their environments recognise that animals have to compete for food
ARE Slightly below	describe how micro-organisms feed, grow and reproduce like other organisms describe evidence, from investigations, that yeast is living explain how micro-organisms can move from one food source to another or from one animal to another  devise own keys to classify organisms and objects describe early ideas about classification (e.g. Aristotle) compare the rate of reproduction in microorganisms to other animals describe how the development of the microscope has contributed to our understanding of microorganisms describe how ideas about hygiene have changed over time (e.g. Semmelweis)  Year 6 Evolution and Inheritance  recognise variation in different species (e.g. dogs, horses) describe how animals and plants are adapted to their environments recognise that animals have to compete for food describe how animals avoid predators (e.g. speed, camouflage)
ARE Slightly below	describe how micro-organisms feed, grow and reproduce like other organisms describe evidence, from investigations, that yeast is living explain how micro-organisms can move from one food source to another or from one animal to another  devise own keys to classify organisms and objects describe early ideas about classification (e.g. Aristotle) compare the rate of reproduction in microorganisms to other animals describe how the development of the microscope has contributed to our understanding of microorganisms describe how ideas about hygiene have changed over time (e.g. Semmelweis)  Year 6 Evolution and Inheritance  recognise variation in different species (e.g. dogs, horses) describe how animals and plants are adapted to their environments recognise that animals have to compete for food
Slightly below ARE	describe how micro-organisms feed, grow and reproduce like other organisms describe evidence, from investigations, that yeast is living explain how micro-organisms can move from one food source to another or from one animal to another  devise own keys to classify organisms and objects describe early ideas about classification (e.g. Aristotle) compare the rate of reproduction in microorganisms to other animals describe how the development of the microscope has contributed to our understanding of microorganisms describe how ideas about hygiene have changed over time (e.g. Semmelweis)  Year 6 Evolution and Inheritance  recognise variation in different species (e.g. dogs, horses) describe how animals and plants are adapted to their environments recognise that animals have to compete for food describe how animals avoid predators (e.g. speed, camouflage) recognise that offspring have some of the features of their parents
ARE Slightly below ARE Broadly	describe how micro-organisms feed, grow and reproduce like other organisms describe evidence, from investigations, that yeast is living explain how micro-organisms can move from one food source to another or from one animal to another  devise own keys to classify organisms and objects describe early ideas about classification (e.g. Aristotle) compare the rate of reproduction in microorganisms to other animals describe how the development of the microscope has contributed to our understanding of microorganisms describe how ideas about hygiene have changed over time (e.g. Semmelweis)  Year 6 Evolution and Inheritance  recognise variation in different species (e.g. dogs, horses) describe how animals and plants are adapted to their environments recognise that animals have to compete for food describe how animals avoid predators (e.g. speed, camouflage) recognise that offspring have some of the features of their parents  recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to
Slightly below ARE	describe how micro-organisms feed, grow and reproduce like other organisms describe evidence, from investigations, that yeast is living explain how micro-organisms can move from one food source to another or from one animal to another  devise own keys to classify organisms and objects describe early ideas about classification (e.g. Aristotle) compare the rate of reproduction in microorganisms to other animals describe how the development of the microscope has contributed to our understanding of microorganisms describe how ideas about hygiene have changed over time (e.g. Semmelweis)  Year 6 Evolution and Inheritance  recognise variation in different species (e.g. dogs, horses) describe how animals and plants are adapted to their environments recognise that animals have to compete for food describe how animals avoid predators (e.g. speed, camouflage) recognise that offspring have some of the features of their parents

	<ul> <li>explain how being well adapted to an environment means an organism is more likely to survive</li> <li>recognise that living things have changed over time and that fossils provide information about living things that</li> </ul>
	inhabited the Earth millions of years ago  explain why we do not have a complete fossil record
Above ARE	<ul> <li>explain that animals which are better adapted to an environment are more likely to survive, reproduce and pass on characteristics to their offspring meaning the animal species will gradually change and evolve (giraffe with the tallest neck could reach more leaves to feed on)</li> <li>describe the story of the peppered moth and how this provides evidence for natural selection</li> <li>explain how antibiotic resistant bacteria provide evidence for natural selection</li> <li>explain why we can see evidence for natural selection in fast reproducing organisms like bacteria (e.g. antibiotic resistant bacteria and pesticide resistant insects)</li> <li>explain how the introduction of a new species to an isolated environment can affect native species (e.g. Dodo, Kakapo or Stephen's Island Wren)</li> <li>compare the ideas of Darwin and Lamarck about evolution</li> </ul>
	Year 6 Light
Slightly below ARE	describe reflection as light 'bouncing off' objects     explore how light travels using torches and periscopes
Broadly within ARE	<ul> <li>understand that in order to be seen, all non-luminous objects must reflect light</li> <li>recognise that light appears to travel in straight lines</li> <li>diagrammatically represent light from sources and bouncing off reflective surface using arrows</li> <li>explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes</li> <li>draw diagrams to illustrate how light is travelling from the source to the eye</li> <li>use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye</li> <li>describe a variety of ways of changing the size of the shadow produced by an object</li> <li>describe the relationship between the size of a shadow and the distance between the light source and an object</li> <li>diagrammatically represent the formation of shadows using arrow convention</li> <li>use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them</li> </ul>
Above ARE	<ul> <li>know that, when sunlight passes through some objects, coloured light is produced (for example in rainbows, soap bubbles and prisms)</li> <li>describe how curved mirrors distort a reflection</li> </ul>
	Year 6 Electricity
Slightly below ARE	<ul> <li>know that the 'amount' of electricity (voltage) depends on the number of batteries</li> <li>construct some working series circuits with specified components</li> <li>recognise conventional circuit symbols</li> </ul>
Broadly within ARE	use recognised symbols when representing a simple circuit in a diagram draw circuit diagrams and construct circuits from diagrams using conventional symbols explore how to change the brightness of bulbs and the volume of a buzzer recall what causes the brightness of bulbs or the volume of a buzzer to change compare different circuits (e.g. for brightness of bulb) recall that the amount of electricity is measured in voltage associate the brightness of a lamp or the volume of a buzzer with the number and voltage of cells used in the circuit compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of buzzers and the on/off position of switches
Above ARE	explore the effect of thickness of a wire in a circuit     describe the differences between wires usually used for circuits and fuse wires     describe what would happen if all lights in a home were connected in the same circuit and one broke     explain current in circuits using simple models and analogies (e.g. piped water, bicycle chain, children and sweets)

Long Term Planning Science

Stiman School

We have identified these learning values as intrinsic to supporting the needs of children in our school: Reflectiveness; Risk-Taking; Stick-Ability; Communication;
